

Press release No. 10/2011

Trees of green

Viprinet joins the green side

Bingen, Germany, 29th June 2011. - As of today, all Viprinet business including the assembly line is powered by green energy from [Greenpeace Energy](#). Thereby, the router manufacturer sticks to their principle of acting responsibly towards nature since Viprinet attaches utmost importance to GreenIT. That's why all Multichannel VPN Hubs are designed to only use 35 or 40 Watts when operating at full capacity - this is less power than most normal light bulbs consume. With the green electricity from Greenpeace Energy, Viprinet devices can now be produced with even more consideration for environment and resources.
