

Press release No. 3/2015

Viprinet again Platinum Sponsor of Revision for 2015

Bingen am Rhein, Germany, 3/31/2015. Viprinet, leading developer and manufacturer of bonding routers once again sponsors Revision (www.revision-party.net) this year. The legendary event takes place from April 3–6, 2015, at the event location E-Werk Saarbrücken, and is one of the largest computer art festivals in Europe and the world's largest demoscene event. Participants from over 30 countries, be they workaholics or party animals, gather at the annual festival, and lock horns with each other in numerous competitions ("Compos").

Not only does Viprinet offer financial support for this event, but also provides its patented bonding technology. In order to supply the expected 1,000 participants at Revision with sufficient bandwidth, 4 Viprinet Multichannel VPN Routers are combined via Node Stacking, bonding a total of 10x LTE, 7x UMTS and 2x DSL into a single VPN connection.

The commitment of Viprinet in this demoscene event is a tradition. Its predecessor, Breakpoint, that took place in Bingen and from which Revision has emerged, was founded and organized by Viprinet CEO Simon Kissel. "Our company has been strongly influenced by the demoscene," says Simon Kissel, and adds: "For us, Revision represents a unique opportunity to get talking to the most creative developers, and capture their imagination for our solutions. This way, we're able to permanently expand our technological advantage over competitors."

The demoscene has evolved from the computer scene of the 1980s. At scene parties like Revision, its members show their skills and creativity in so-called demos. These are short computer animated films with music and effects that take place in real time. For the participating programmers, artists and musicians, these demos are not only a matter of artistic design, but also of exhausting the technical possibilities.

About Viprinet Europe GmbH

Since 2006, Viprinet has been manufacturing innovative network components. Viprinet is the inventor of a patented technology which really aggregates bandwidths of different WAN connections (xDSL, cable, mobile, or satellite). Today, about 50 employees develop, produce, and sell Viprinet products worldwide from Bingen am Rhein in Germany. All products of Viprinet are "Made in Germany" and fulfill highest standards concerning security and confidentiality.
