

Press Release No. 7/2015

German Router Manufacturer Viprinet Premieres at ANGACOM 2015 – Bonding Routers Shown Live at Hall 10.1, Booth U16

Bingen, Germany, 06/10/2015. Viprinet, developer and manufacturer of bonding routers that are capable of aggregating WAN connections via different broadcast media like xDSL, mobile, or satellite into a single VPN link, will be present at ANGACOM 2015 in Cologne, Germany, for the first time. From June 9–11, 2015, the router specialist will show its extensive product portfolio in hall 10.1 at booth U16, and introduce novelties in regards to software and hardware.

Amongst others, the company focuses its exhibition around the introduction of the newest generation of Viprinet VPN bonding technology that will be brought to market under the brand name “RuggedVPN”. Due to distributed forward error correction that allows transmission of redundancy information for the bonded channels, this patent-pending technology is able to bond even extremely faulty lines and use them for data transmission that is free of any packet loss. “As packet loss is balanced for single links, the bonded connection achieves very high stability even when the connectivity of an individual line is very unsatisfying”, Viprinet CEO Simon Kissel explains. “With RuggedVPN, it’s possible to establish stable video conferences even in high-speed trains at a speed of 300km/h (180mph)”, he adds.

The IT company from Bingen, Germany, also presents hardware innovations. As Viprinet’s international customer portfolio has been growing constantly over the past few years, the company has extended its product range for different mobile and stationary fields of application by new country-specific Hot Plug Modules, such as 4G modules for the U.S. or Australia.

Viprinet shows its products and solutions live at its booth U16 in hall 10.1. The company will be happy to advise visitors interested in Viprinet solutions about individual solutions – Viprinet’s technology experts are already looking forward to discussing specific networking challenges with interested parties.

About Viprinet Europe GmbH

Viprinet has been manufacturing innovative network components since 2006; their patented technology makes it possible to aggregate the bandwidths of a variety of WAN connections at the same time (xDSL, cable, mobile, or satellite). Today, about 50 employees develop, produce, and sell Viprinet products worldwide from Bingen am Rhein in Germany. An additional sales office opened in Sunnyvale, California, in early 2015. All Viprinet products are made in Germany and fulfill the highest standards of security and confidentiality.
